

Vehicle Values

Our vehicle values require **complex analytics to derive a near real-time market related value**. Values are based on **actual sales transactions** which are **updated daily**. The values are then **generated based on sound statistical models** to derive the **various touch points** during a customer or vehicles life cycle events.

Values are available via:

Web-services

Flat-files

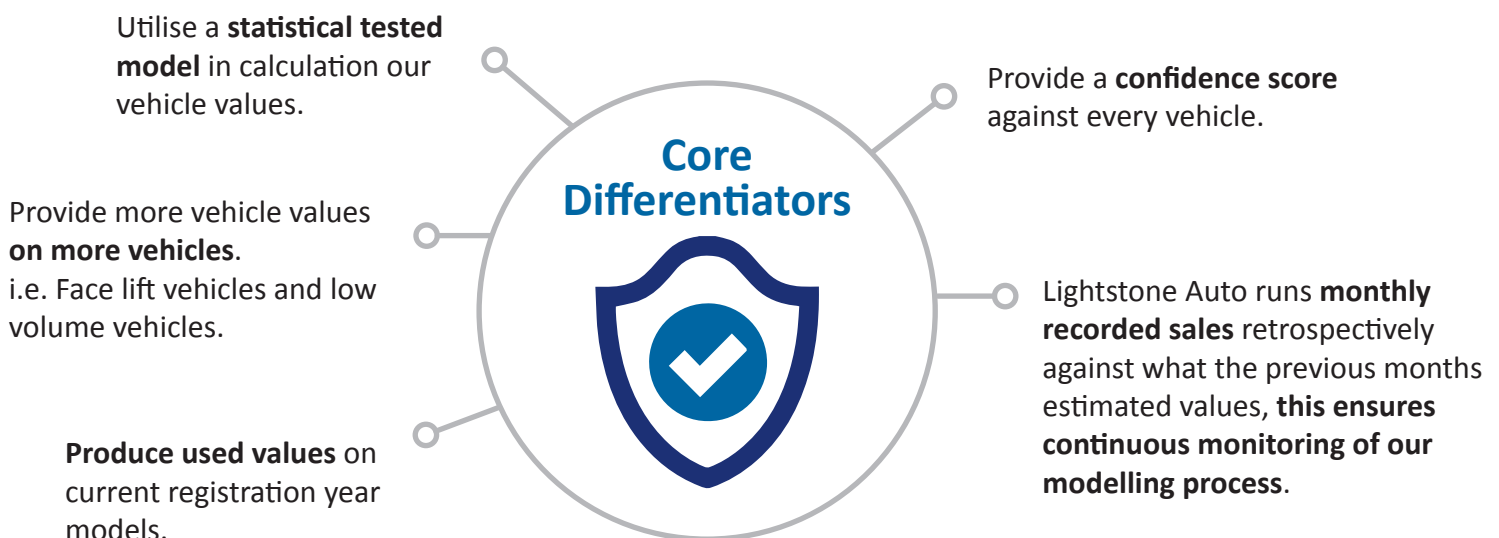

Mobile App

Current vehicle values:

(These are average prices, condition and mileage would still need to be taken into consideration.)

- **Retail Value** - Price of the vehicle when sold to a customer.
- **Trade Value (total into stock)** - Price that the vehicle will cost the dealer when sold. This would include associated costs such as; repairs done, service, maintenance, body work, new tyres, etc.
- **Cost Value** - Price paid by the dealer to the customer.
- **Auction Value** - This is a distressed value, i.e. Repossession.

Data driven analytics, market insight, vehicle information and compliance expertise to the South African motor industry.
